

## Honeybush cultivation, a potential ecological trap?

Assessing the vulnerability of wild *Cyclopia* populations to genetic pollution by the expanding Honeybush industry

N.C. Galuszynski, Dr A.J. Potts, Prof. R.M. Cowling

What's the problem(s)? Genetic threat.  
Erosion-Swamping-Hybridization

# Genetic erosion

The diminishing or loss of a unique gene pool within a species

High intensity wild harvesting

Establishment of low diversity plantations

&

Inbreeding depression and loss of adaptability

## GENETIC EROSION IN WILD POPULATIONS MAKES RESISTANCE TO A PATHOGEN MORE COSTLY

Emilien Luquet,<sup>1,2</sup> Trenton W.J. Garner,<sup>3</sup> Jean-Paul Léna,<sup>1</sup> Christophe Bruel,<sup>4</sup> Pierre Joly,<sup>1</sup> Thierry Lengagne,<sup>1</sup> Odile Grollet,<sup>1</sup> and Sandrine Pénet<sup>1</sup>

<i>N</i> females	<i>N</i> alleles (SE)	Allelic richness (SE)	<i>H</i> <sub>exp</sub> (SE)
30–50	4.00 (0.68)	3.63 (0.62)	0.38 (0.07)
15–25	3.60 (0.52)	3.56 (0.51)	0.37 (0.07)
∞	5.60 (0.49)	5.52 (0.47)	0.43 (0.06)
∞	4.73 (0.50)	4.71 (0.50)	0.46 (0.06)
∞	4.4 (0.37)	4.28 (0.36)	0.41 (0.05)

# Genetic Swamping

Replacement of locally adapted genes with those of foreign origins

Small, isolated wild populations as sink

Large cultivated populations as source

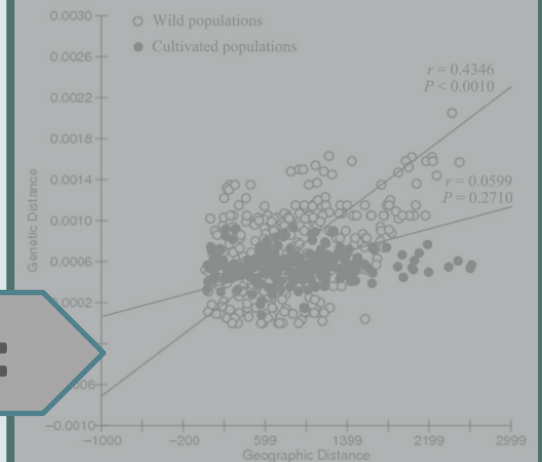

&

Loss of local adaptations and population structuring

Impacts of recent cultivation on genetic diversity pattern of a medicinal plant, *Scutellaria baicalensis* (Lamiaceae)

Qing-Jun Yuan<sup>1</sup>, Zhi-Yong Zhang<sup>2\*</sup>, Jian-Hu<sup>1</sup>, Lan-Ping Guo<sup>1</sup>, Ai-Juan Shao<sup>1</sup>, Lu-Qi Huang<sup>1\*</sup>

Parameter	wild	cultivated	P
Number of haplotype	25	22	0.733†
Total diversity, $h_T$	0.888 (0.0287)	0.832 (0.0234)	> 0.05‡
Within-population diversity, $h_S$	0.265 (0.0526)	0.649 (0.0425)	< 0.001‡
Population differentiation, $G_{ST}$	0.701 (0.0594)	0.220 (0.0449)	< 0.001‡

# Hybridization

Formation of new ecotypes or species through distant outbreeding

Species naturally separated

- Narrow distribution SP
- genistoides
  - longifolia
  - alopeurooides
  - alpina
  - aurescens
  - bolusii
  - sessiliflora
  - bowiesana
  - burtonii
  - glabra
  - latifolia
  - laxiflora
  - meyeriana
  - plicata
  - pubescens
  - squamosa

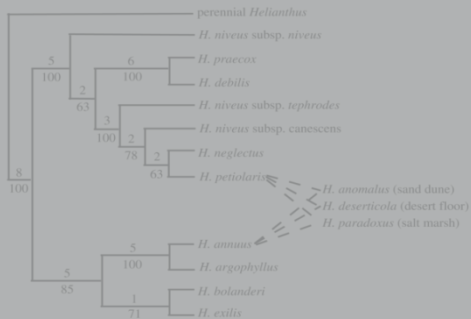

Cultivated populations break barriers

Novel hybrid species\_vigor & breakdown

Hybridization and the colonization of novel habitats by annual sunflowers

Loren H. Rieseberg<sup>1</sup>, Seung-Chul Kim<sup>2</sup>, Rebecca A. Randell<sup>1</sup>, Kenneth D. Whitney<sup>1</sup>, Briana L. Gross<sup>1</sup>, Christian Lexer<sup>2</sup>, and Keith Clay<sup>1</sup>

So how vulnerable is honeybush to genetic threat?  
Very!

# Causes of Honeybush vulnerability

Intrinsic ecological traits vs. commercial production

## Genetic erosion

- Naturally low genetic diversity
- Habitat fragmentation
- Harvesting history
- Clonally cultivated populations

## Genetic swamping

- Population structuring
- Genetic improvement program
- Large cultivated populations

## Hybrids

- Mixed species communities
- Genetic improvement program
- Rare species with small populations
